La route des laves is a vast theatre of nature where the Earth regularly stages spectacles of fire. Each lava flow is an event reminding humans of the challenges they need to take up in order to live in the region of an active volcano.

Grand Brûlé is an outstanding natural area which is included in the National Park of Reunion together with the heart of the volcano. The outstanding value of its landscapes and biodiversity was recognized worldwide in 2010 when the “Pitons, cirques and remparts of Reunion Island” were listed as a UNESCO World Heritage site.
The column, a vortex of landscapes.

The generic landscapes are shaped and reshaped according to the whims of the column. Fashioned by eruptions, collapses, and streams, they bear witness to the cycle of the earth and its life. Here, forests, the history of our past.

The column, a cycle of nature.

The landscapes of the column are a melting pot of culture; the red of the volcanic soil, the black of the scattered boulders, the grey and green of competing vegetation, and the blue of the ocean are the living manifestation of permanently evolving earth.
